- Flexibility
- Market knowledge and penetration
- Security of supply
- Reliable delivery and planning
- Transparent costs and performances

Focus on „Us“

Efficient network

The KRUSE Group is an independent, owner-managed company. As a full-service chemical supplier the Chemicals division can guarantee a comprehensive distribution and service network thanks to its own closely interconnected branches and sales offices at various locations.

The distribution and bulk business in Germany and abroad is coordinated by the business unit Basic Chemicals, while applications and products requiring technical explanations and expertise are concentrated in the business unit "Applications." This multi-criteria approach permits us to provide you with an efficient key account management, single sourcing and a long-term partnership.

Focusing together on „Us“!

Solutions and concepts

- Key account management / Single supplier management
- C-article management / Single sourcing
- Junk goods management for solvents, acids and bases
- Optimisation of fresh, drinking, industrial and waste water
- Individually created formulations and compounds
- Stock management / Tank telemetry
- Product management
- Business development

Many different sectors profit from the know-how and future orientation of the KRUSE Group.

Water chemicals

With its specialised team of technicians, KRUSE offers solutions and concepts throughout Germany for the preparation and treatment of municipal and industrial waste water, drinking water, fresh water and industrial water. Even in the USA, Kruse, via its affiliated company Contichim North-America Inc, supplies chemicals for the treatment of potable water in the New-York State.

Winter road clearance

The effective salts, granules and salt solutions from KRUSE are used throughout Germany as gritting and thawing agents. Supply via long-standing partnerships with manufacturers and from our own production plant in southern Germany ensures availability even in extreme winters.

Speciality chemicals, minerals and pigments

Speciality chemical activities are concentrated at KRUSE Bassermann Specialities. High-grade minerals, bulking agents, pigments, resins and many other products requiring explanation are marketed in the relevant sectors by specially trained experts. KRUSE frequently acts as the extended distribution arm of the manufacturers.

CHEMICALS DIVISION Focus on know-how transfer

The close national and international networking of the Chemicals division within the KRUSE Group guarantees the efficient realisation of complex solutions and concepts. Know-how transfer has become a company strength. Our products portfolio is perfectly geared to the needs of our customers. This forms the basis for successful and long-lasting partnerships.

KRUSE

GRUPPE

Surface technology

We offer our own paint and grease removal agents based on CHCs, delivered partly in safety systems, as well as CFC and CHC substitutes, thinners and many other speciality products.

With our internally developed Schwarzloh products our programme also includes a wide range of aqueous, acidic and alkaline cleaning agents for various surfaces.

Foreign distribution and bulk business

With our sales offices in the Netherlands, Belgium, France and the USA we are your ideal partner for the provision of solid and liquid chemicals. Our own storage tanks at selected locations ensure reliable supply.

Via our distribution branch in Poland you can receive a range of products which is comparable to that offered by our German warehouses.

German distribution and bulk business

Eight innovative distribution branches ensure the comprehensive, reliable and safe flow of goods in Germany, both in storage and in complete tanker trucks en route.

Our own tank/silo systems and filling facilities allow packing units ranging from small containers, barrels and IBCs to partial and full shipments in road tankers.

Our state-of-the-art transport fleet with tank, container and silo trucks allows high flexibility and variability.

At the Hamm Chemie location in Oberhausen there are various storage tanks which are supplied by ship via the Rhine-Herne Canal.

Recycling/Disposal

KRUSE is your ideal partner when it comes to recycling and waste disposal.

At KRUSE RCN Recycling in Goch, halogen-free and halogen-containing solvents, CHCs, CFCs and other liquid media are recycling and distilled.

At Hamm Chemie in Oberhausen, a joint venture of the KRUSE Group, substances including spent acids from the steel and metal-manufacturing industry are treated.

We work hand in hand for our customers and our suppliers!

Did you know that our work plays a major role in everyday products and many other product groups?

You also use these products:

Soap, shampoo, shower gel, skin cream, face masks, cotton wool, bandaging material, dishwasher powder, wall paint, printing ink, crayons, artist paints, tableware, book bindings, car polishes, tin cans, batteries, swimming pools, solar modules, jewellery, sanitary faucets, car rims, paper, cardboard, bicycles, fitness equipment, table salt, fruit juice bottles and many, many other products.

Focus on the markets!

The experts in the Chemical division of KRUSE constantly observe all the relevant national and international markets. This ensures that you are supplied with the best products at the most cost-effective terms. You can always rely and trust on us.

The range of applications in the wide variety of target markets supplied by the KRUSE Group is astonishing!
